

Better pellet protection right out of the gate.

Amsted Rail has expanded its complete line of pellet car components whose innovations have set new standards worldwide for durability and performance. For over a decade, Amsted Rail has been perfecting their pellet car system, which features the Universal Hatch Cover and the newly redesigned Ellcon Pneumatic Pellet Outlet Gate.

4 Simple Steps of Operation

Closed

Unlatch and Open Cap

Turn First Handle

Turn Second Handle

- Maintains efficient throughput, while reducing friction-induced melting and resin buildup on conveyor line
- Lightweight, watertight, rugged design to protect integrity of pelletized chemicals
- Interior constructed of aluminum with smooth finish for low maintenance, easy cleanout
- Low profile design available
- Dual shaft allows sampling from either end and its valves permit infinite flow rate control and widest available opening for easy sampling and unloading
- Hooks to pneumatic discharge system when pellets are vacuum extracted
- Bolt on connector assembly with locking end arrangements
